

## Family Structure and Theft

Theft by Family Structure<sup>1</sup>

Source: Adolescent Health Survey, Wave I. Adolescents grade 7-12.

Adolescents who live in an intact married family are less likely to steal than those living in step-families, those whose parents are divorced, or those raised by cohabiting parents.

According to a confidential survey conducted as part of the National Longitudinal Study of Adolescent Health, Waves I and II, 13 percent of children who live in an intact married family admit to having stolen at least \$50 worth of goods.<sup>2</sup> By comparison, 19 percent of children whose parents never married or are divorced have stolen as much, as have 20 percent of those living with a step-parent, 15 percent

of those living with cohabiting biological parents, and 23 percent of those living with one cohabiting biological parent.

### Other Studies

Several other studies corroborate these findings. Amy Anderson of Pennsylvania State University found that children living in one-parent households were more likely to commit property crimes than those living in two-parent households.<sup>3</sup>

George Thomas of the Research Institute on Addictions and colleagues also reported that adolescents living with both biological parents have the lowest delinquency levels.<sup>4</sup>

In a study of adolescents in the United Kingdom, Patrick Miller and Martin Plant of the University of the West of England found that children living in single-parent households were more prone to vandalism and theft.<sup>5</sup>

When it comes to raising adolescents who don't steal, in general, married parents do the job better.
