

Family Structure and Welfare Dependency

Issue: Intact, married families are the least likely to depend on welfare, and children raised in a home headed by their married biological mother and father are dramatically less likely to end up on welfare as adults.¹ However, current welfare policies impede individuals from breaking their welfare dependence by discouraging two efficient escape routes: marriage and employment.

Broken Families Receive Most of Welfare

- In 2011, federal and state governments spent over \$450 billion on means-tested welfare for low-income families with children. Roughly three-quarters of this welfare assistance, or \$330 billion, went to single-parent families.²
- Three-fourths of all women applying for welfare benefits do so because of a disruption of marriage.³
- Over 75 percent of mothers who give birth out-of-wedlock will be on welfare within five years.⁴
- Daughters from families that had received welfare were three times more likely to receive benefits themselves within three years of their first child's birth.⁵

Persons receiving >25% of their Total Income from Means-Tested Assistance Programs, by Family Category

Welfare Discourages Marriage

- Many welfare programs impose a “marriage penalty” that makes married couples ineligible for assistance. This penalty especially falls most heavily on low or moderate income families with children.⁶
- Couples who receive government assistance have drastically lower levels of overall marital satisfaction and commitment.⁷
- Marriage promotes employment. The income of married adults significantly exceeds the income of unmarried adults at every education level.⁸

Welfare Discourages Work

- Welfare currently pays more than a minimum-wage job in 35 states, and in 13 states it pays more than \$15 per hour.⁹

Conclusion: Welfare, as presently structured, has had a predictable and pernicious effect on the overall response of recipients to marriage as well as to work.¹⁰ As shown by MARRI research available online¹¹, encouraging the formation of intact, married families is a natural and efficient means for reducing welfare dependence. As the saying goes, “You get more of what you pay for.”¹²
